Virginia Coover : The Natural Greenhouse, Growing Plants and Food for Profit before purchasing it in order to gage whether or not it would be worth my time, and all praised The Natural Greenhouse, Growing Plants and Food for Profit:

3 of 3 people found the following review helpful. A must have for serious gardeners to take it to the next levelBy K. MastersThis book is very thorough, it encompasses everything you need to know to start your own greenhouse. Whether you want to start small or grow to sell there is a wealth of information in here that would help any greenhouse operation. What a bargain, it would take me years to find all this information in other sources. Great resources, photos and illustrations too!

An alternative to high-price and low-quality foods. Explains how to raise plants and vegetables in a natural greenhouse without the use of toxic chemicals, for personal use and to sell. Based on 26 year of experience by the author. Published by Sun and Shade Publications, PO Box 22, Shade, Ohio

Greenhouses create optimum environments for growing plants year round. "The Natural Greenhouse: Growing Plants and Food for Profit" is an informed and informative instructional guide to those who want to take their gardening hobby to a professional level of competence, as well as those who are considering turning their gardening into a business. With advice on what to grow, how to grow it, and when to grow it, "The Natural Greenhouse" covers a wide range of subjects from getting started, to protection issues such as insects and pesticides. If you're thinking of turning your garden into a business, or simply doing your own horticultural research and experimentation, "The Natural Greenhouse" is what you need to work efficiently, effectively, and successfully. --Midwest Book Subject: During this time of soaring food prices and safety issues, more people are growing their own food. The greenhouse will help control environmental factors for attaining higher yields. The book offers a total approach to greenhouse construction and growing. For those interested in selling their plants, a complete business model is included. Subtitle: "Growing Plants and Food for Profit". Noteworthy: The book may be the most detailed and understandable book for growing plants and food in a greenhouse ever published--supply sources included. The author has 26 years of experience growing and marketing greenhouse plants and vegetables. --The Mindquest of BooksAbout the AuthorThe author has grown greenhouse plants and vegetables for twenty-six years. She sold out of her greenhouse for fifteen years and has been a vendor at the Athens (Ohio) Farmers' Market for twenty-one years. She helped design and build her greenhouses and workspaces. For two years she managed a producers' cooperative that sold local plants, fruits, vegetables, meats, eggs, and processed food products. Originally trained as a high school biology and general science teacher, she now promotes natural greenhouse production through presentations and workshops.
