It's more like a booklet with calendar dates in a grid inside. I have to say, it's rather difficult to decipher with all the little symbols and it would be SO much more user friendly if it were a wall calendar size. As it is, I'm just not using it.0 of 0 people found the following review helpful. I also have given the calendar as gifts to family and friends.1 of 1

people found the following review helpful. A must-have!By Bookworm426Can't imagine planning or planting without this calendar. Better quality plants, less irrigation, higher yield, and longer-lasting harvests.

The 2016 Maria Thun biodynamic calendar, now in its 54th year, is adapted for North American dates and Eastern Standard Time. This useful guide shows the optimum days for sowing, pruning, and harvesting various plant crops, as well as working with bees. It includes Thun's unique insights, which go above and beyond the standard information presented in most lunar calendars. It is presented in color, with clear symbols and explanations. The calendar includes a pullout wallchart that can be pinned up in a barn, shed, or greenhouse as a handy, quick reference.

'This annual publication is the book for those who want to farm and garden biodynamically. There are useful notes for new readers and a number of special features, including this time the care of bees with monthly notes for beekeepers, how to work with biodynamic preparations, a recipe for rye bread and answers to questions from readers concerning potato and tomato culture.' -- David Lorimer, Scientific and Medical Network 'This little paperback is essential for all organic gardeners. It is the original annual biodynamic planting guide. Incredibly condensed amounts of information are available [here] ... Illustrated throughout with some lovely photos and clear diagrams.' -- Ysanne Spevack, Organicfood.co.uk 'This little paperback calendar is the original of its kind and essential for all organic gardeners. An established following ensures good sales of this useful guide, which has a special feature on the care of bees.' -- Veronica Leek, The Bookseller Buyers' Guide About the Author Matthias Thun is the son of Maria Thun, the biodynamic pioneer who died in 2012. On their farm in Germany, Matthias is continuing her research into the effects of biodynamic agricultural methods.
