**John Fontanetta, Al Heller : The Passive Solar Dome Greenhouse Book** before purchasing it in order to gage whether or not it would be worth my time, and all praised The Passive Solar Dome Greenhouse Book:

This book describes how to build a passive solar dome from start to finish, allowing you to build one without special tools or equipment. The 23-foot diameter sturdy dome greenhouse is built with low cost but scientifically proven materials and is appropriate for virtually any sunlit site. Includes information on selecting a site, buying materials, costs, building smaller and larger domes, pre-heating water to reduce water bills, using the dome as a source for auxiliary home heat, assembly-line construction techniques, and growing vegetables to save money.
