**David Joyce : The Perfect Plant: For Every Site, Habitat, and Garden Style** before purchasing it in order to gage whether or not it would be worth my time, and all praised The Perfect Plant: For Every Site, Habitat, and Garden

Style:

Featuring thousands of specially commissioned color photographs, a guide offers in-depth descriptions of the two thousand hardiest and loveliest plants for any garden, including detailed information on their characteristics and cultivation requirements. 30,000 first printing.

.com David Joyce's outstanding plant encyclopedia, first published in Great Britain, has detailed descriptions and photographs of more than 3,000 plants. Though it still contains descriptions of worldwide plant communities (that show, for example, the similarities and differences between the prairies of Texas, European alpine meadows, and the grasslands of Africa and New Zealand), the plant directory has been adapted to the North American climate (which ranges from zone 1 to zone 11) by John Elsley. The directory is sorted into trees, shrubs, conifers, climbers, roses, perennials, bulbs/corms/tubers, annuals/biennials, and bamboos/grasses/ferns. With its nicely detailed listings, highly readable layout, and small but luminously clear photographs, this is the book you'll want to take along to the nursery.
