Exactly what is needed in your search.1 of 1 people found the following review helpful. What an AMAZING BOOK! Highly recommended.By LollyGirlAn enormous list of seed sources for 40,000 or so flowers, shrubs, trees, grasses, vegetables, and other plants in the seed trade. The book has a separate chapter on vegetables. It includes everything from Amaranth and Artichokes to Watermelon and Wheat, and everything in between. For each, author Platt offers a typically long list of varieties and one to several seed souces. For example, the

book includes 53 different dent and flour corns, about 180 different cucumbers, and even 28 different radicchios. Who knew? Other vegetables receive equally detailed treatment. Many US gardeners will hope for more stateside suppliers, but Platt notes which of the many European companies are set up to handle exports.
