Julius Panero, Martin Zelnik, Joseph De Chiara : Time-Saver Standards for Interior Design and Space Planning before purchasing it in order to gage whether or not it would be worth my time, and all praised Time-Saver Standards for Interior Design and Space Planning:

1 of 1 people found the following review helpful. Great resource for office conference room layouts and moreBy james reddrickI constantly reference this book for conference room layout of seating/tables. I also use this book for office layouts. Great resource that I keep close to get a quick insight on how many people, tables, and chairs should fit into a given space comfortably.1 of 1 people found the following review helpful. Time-Saver Standards for Interior Design and Space PlanningBy D. LuebbersHUGE ASSET! This book has everything in it and has been extremely helpful. It is a big book, therefore, it is not easy to carry around. I take it to school occasionally-I have chosen to lug it around in a rolling cart--most helpful for all those books and drawing tools, etc. One downside, sometimes the print is so small you may have to have a magnifying glass to see what is written.Purchasing this book on saved me a lot of

money. I highly recommend this book for Interior Design students and Designers. 0 of 0 people found the following review helpful. This is the "bible" for Interior Designers!! A great book to buy!! I love it!! By Apryl Amazing book!!! I am so happy I purchased this!! At a great price too! Thanks!!

This is a comprehensive sourcebook for planning and designing residential and commercial interiors. The volume provides time and money-saving details for all types of construction details and finishes, woodworking and special treatments. The book offers drawings, data and details on typical layouts and clearances for residential kitchens, bathrooms, living rooms and bedrooms. There are also construction details floors, walls, doors, windows, stairs, metalwork, pools, fountains, finishes, furnishings and furniture as well as electrical, lighting, HVAC, and plumbing systems.

"... a comprehensive handbook of graphic standards. Professionals in interior design will find it useful, although they will probably buy personal copies. Architecture libraries will want the work, and public libraries serving home remodelers may also feel it a necessary purchase. Librarians planning a new building will also find it very helpful. -- Booklist, January 1992 "A comprehensive reference of all that was left out of the 8th Edition well-known "Ramsey-Sleeper" Graphics Standards, a book that serves as a standard reference of many architectural offices." -- New York Society of Architects Bulletin, 3/92 "Interior designers now have an authoritative handbook specifically geared to the planning and design of interior spaces." -- American Reference Book Annual, 1992 "The TIME-SAVER STANDARDS FOR INTERIOR DESIGN AND SPACE PLANNING is a comprehensive reference of all that was left out of the well known 'Ramsey-Sleeper' Graphics Standards that serves as the standard reference of many architectural offices... thorough and informative, providing what every office needs. It is clearly a superior and more organized interior design 'reference' book than most others on the market. A must for any office involved in interior design and space planning" -- New York Society of Architects Newsletter, January 1992 "The editors of this excellent compendium note in the Foreword that it is, 'a resource of incredible range and detail,' and indeed it is treasure trove of practical information on both residential and commercial interiors, one that thoroughly examines the planning data, technical details, and decorative elements needed to design and plan interior spaces... gives hundreds of useful and time-saving details for furniture and interior elements... highly recommended for all libraries, and for professionals working in various aspects of architecture and design." -- Academic Library Book , 12/92
