Harold Hall : Tool Cutter Sharpening (Workshop Practice) before purchasing it in order to gage whether or not it would be worth my time, and all praised Tool Cutter Sharpening (Workshop Practice):

1 of 1 people found the following review helpful. Very Thorough and DetailedBy CustomerThis series of books is very technical. I was hoping for a high school level course but these seem more college oriented. But, I can't complain about a product being TOO good, can I?0 of 0 people found the following review helpful. I wanted something more detailed about sharpening half inch square ...By donI wanted something more detailed about sharpening half inch square pieces, but this was ok for what it was published for11 of 11 people found the following review helpful. Excellent book on lathe and mill tool sharpeningBy RichardVery well written and loads of good information.Tells you

how to build jigs for 4 point drill sharpening and a jig for sharpening the sides of end mills. Recommended.

Sharpening workshop tools is probably the most diverse of all workshop activities and the one that is least understood by the majority of workshop owners. This is not unreasonable in view of the wide range of equipment suggested for the task, ranging from the complex (typically an industrial tool and cutter grinder) through to the humble off hand grinder. This book illustrates how most sharpening tasks can be carried out using an off hand grinder and a few simply made accessories to a standard comparable to that achieved using much more sophisticated equipment. Follow the instructions in this book and working with blunt tools will be a thing of the past! "The Workshop Practice Series" is the world's leading range of books for model engineers and mechanical crafts: some of the books have been in print for 50 years; most of them still reprint every 18 months. It is fully illustrated step-by-step with photographs and technical drawings.

About the Author Author Harold Hall has established his reputation as a mentor to tyro engineers through the pages of Model Engineers' Workshop of which he was the editor for a number of years and through his other two titles in the Workshop Practice series, Lathework: A Complete Course and Milling: A Complete Course.
