Nan Sterman : Water-Wise Plants for the Southwest (Water Gardening) before purchasing it in order to gauge whether or not it would be worth my time, and all praised Water-Wise Plants for the Southwest (Water Gardening):

0 of 0 people found the following review helpful. This is very useful when planting or planning your own garden. By Alice SimI moved to AZ from another part of the country and found the vegetation here confusing. This book has helped me tremendously in picking out appropriate plants for my garden. The book does not cover all desert plants/trees but ones that are deemed "water wise". I found it helpful that the authors also cited plants that would compliment the one that was being discussed. This is very useful when planting or planning your own garden. I was

able to group things according to their recommendations. I continue to use this book on a yearly basis to review water and various information to keep my plants growing and healthy throughout the summers and the winters in AZ. 1 of 1 people found the following review helpful. **Water-wise planting** By R. Putnam This is a nice little book, but too general for Arizona planting. There is good information about HOW to plant, but a very limited selection of actual plants illustrated. I was spoiled by the free material from the classes provided by the city governments here. I figured the book would expand on the classes I took, and it doesn't. If you can't take a water management class, this is a nice book if you're on a limited budget. I would spend more for something larger, and more specific if possible, if I were you. 0 of 0 people found the following review helpful. **Clear, concise, beautiful** By Elaina This is a great planning reference because it is so well organized. Great for the visual learner. A must for anyone in the Southwest.

Water-Wise Plants for the Southwest is a must have resource for any Southwest gardener facing water-shortages. It is filled with expert advice from proven low-water gardeners, and includes everything from using tried and true low water use plants in the landscape, efficient watering and cultivation tips from planting to maturity, to new water-wise cultivars and species. The book features inspirational photos of low-water residential landscapes and more than 100 plant recommendations with helpful icons for ease of use. Also included is an extensive reference guide with listings of botanical and water conservation demonstration gardens, educational opportunities, irrigation suppliers, technical support, websites, and professional organizations. This book is one you would recommend to any gardener facing limited water resources.

About the Author Nan Sterman is a horticulturist and well-known garden writer who was the former editor of the San Diego Home, Garden and Lifestyle Magazine and is an award winning writer for the Los Angeles Times, the San Diego Tribune, Sunset Magazine, Organic Gardening magazine and many others. She is the author of the California Gardeners Guide Volume II which is about gardening with low water, climate appropriate plants. Nan is an advisor to the San Diego Water Authority and answers the Water Smart Pipeline, a low water gardening hotline for the Water Conservation Garden in El Cajon, CA. Nan is well known for promoting the use of California native plants and other plants with low water. Nan is co-producer and host of A Growing Passion, a television show about real world , sustainable home gardening
