Clayton R. Oslund : What's Doin' the Bloomin'?: A Guide to Wildflowers of the Upper Great Lakes Regions, Eastern Canada And Northeastern USA before purchasing it in order to gage whether or not it would be worth my time, and all praised What's Doin' the Bloomin'?: A Guide to Wildflowers of the Upper Great Lakes Regions, Eastern Canada And Northeastern USA:

2 of 2 people found the following review helpful. but it presents gorgeous photographs of the most common species and is a joy to use. By H. E. Price Newcomb's Wildflower Guide Oslund's book is not as complete in its coverage of the diversity of species of plants in the northeastern U.S. and eastern Canada and is not as systematically organized as Newcomb's Wildflower Guide, but it presents gorgeous photographs of the most common species and is a joy to use. 5 of 5 people found the following review helpful. Great book. By Catherine A. This book is, hands down, the best plant book there is for my part of the country. I absolutely love and depend on it, and have given it many times as a gift. It is unfortunate that it has an incredibly stupid name, but we live with it. We are very grateful to the Oslunds for tremendous efforts obviously put into researching and preparing this book. We have used the previous edition for years, it is very much depended on in our outings. 2 of 2 people found the following review helpful. J. Ludwig. By John Ludwig. I've been very pleased with this book. I purchased one for each of my vehicles. I have an older edition that I got from a friend that I keep in my house and was very happy with it as well. This is an excellent resource, very well done.

A comprehensive guide with over 340 species of native and naturalized plants with more than 620 full color photographs. Organized by bloom time for your spring to fall nature hikes. Complete index of scientific and common names of herbaceous and native woody plants included. New to the third edition are tips for incorporating native wildflowers into your home landscaping projects, a list of nurseries where you can find rare and unique species to complete your collections, more plants and new photos, and updates to the scientific naming of families, genera and species.

About the Author Clayton Oslund (Ph.D. Horticulture) has taught Biology for 20 years at the University of Minnesota's two year college in Waseca, Minnesota. This campus was dedicated to agricultural degrees. Clayton now works extensively with Garden Clubs, Master Gardener groups, presents courses for "University for Seniors," consults, and writes.
