**Herbert L. Edlin : What Wood Is That?: A Manual of Wood Identification (Studio Book)** before purchasing it in order to gage whether or not it would be worth my time, and all praised What Wood Is That?: A Manual of Wood Identification (Studio Book):

0 of 0 people found the following review helpful. My husband loved itBy sara lucas-dreissThe book was in pristine

condition minus the Purple Heart oxidizing and turning brown. For such an old book I felt lucky! My husband loved it!!!0 of 0 people found the following review helpful. Good job, Herbert LBy CustomerIt helped me identify wood, which is exactly what it's supposed to do. Good job, Herbert L. Edlin, you magnificent man.0 of 0 people found the following review helpful. From forest to furnitureBy Robert TurnerThis book brings about 40 different trees from the forest to the sawmill, richly written, and has actual wood strips in the front. Quite technical in description of the wood anatomy. Great read if you like woodworking, or wood cutting/burning for that matter.

Strong, pliable, and natural, wood is the world's most versatile structural resource. But how to tell one kind from another and choose just the right wood for your project? This remarkable collection of forty actual wood samples shows the color, grain, and texture of the leading varieties. Detailed drawings identify uncut, unfinished trees by their leaves, fruits, and bark. Originally published in 1969, and now in its eighth printing, this straightforward text explains where each kind of tree is grown and how to use its wood to the best advantage—from lamination to veneering, from carving and molding, to finishing. Here, too, is the history of man's use of wood from the Stone Age ax to modern-day conservation issues and rare rain-forest species. *What Wood Is That?* is an invaluable resource for builders, homeowners, and hobbyists—and a fascinating companion for forest guides and nature lovers.

.com The title of this book could not be more explicit or apt. With 40 actual wood specimens in popular use, descriptions of grain, color and texture, how to identify trees by their leaves, fruit, and bark, and much more, this is a small encyclopedia for woodworkers, carpenters, hobbyists, dealers, architects, craftsmen, nature lovers, teachers, or anyone with the urge to learn about wood. With small, aromatic samples of 40 varieties of wood, from afrormosia to zebrawood, this book even smells good! --Mark HettsAbout the AuthorHerbert L. Edlin was a noted timber authority and Forest Officer of England's historic New Forest.
