Required text for Power UsersBy Harold McFarland"Windows XP Power Tools" is a fantastic collection of tips and tricks for really using Windows XP to it's fullest potential. Each of the advanced techniques is fully explained in a way that you can feel comfortable implementing it without concern that you will be breaking something else. Topic coverage is extensive and includes advanced setup information such as startup and shutdown control, networking, OS components, FTP hosting, hardware, remote access and VPN connections as well as maintenance information on items such as the registry, security, automated tasks, the command console, policies, and recovering from disasters.If that weren't enough reason to purchase the book (which, believe me, it is), it also has a CD with many useful utilities. If you want a book that is well written and comprehensive with detailed instructions to make you a real power user and troubleshooter then this

is an excellent choice - A highly recommended book.

Step-by-Step Instruction Helps You Harness the Full Power of Windows XP Whether you're running Windows XP Home Edition or Professional, Windows XP Power Tools arms you with the advanced skills you need to become the ultimate power user. Full of undocumented tips and tricks and written by a Windows expert, this book provides you with step-by-step instructions for customization, optimization, troubleshooting and shortcuts for working more efficiently. A must-have for power users and network administrators, Windows XP Power Tools includes a CD filled with power tools including security, e-mail, diagnostic and data recovery utilities. Coverage includes: \* Performing network, automated, and unattended installations \* Controlling Windows XP startup and shutdown \* Controlling printing \* Auditing the system \* Adding and removing OS components \* Understanding and managing the Registry \* Working with Device Manager \* Setting up and troubleshooting incoming and outgoing connections \* Hosting FTP sites \* Performing backups and recovering from disasters \* Managing users and groups \* Setting up, monitoring, and managing Remote Access \* Configuring and optimizing TCP/IP \* Managing certificates \* Configuring VPN connections \* Encrypting your files
